"We pride ourselves in having Adaptability, Depth of Knowledge and excellent execution in the Analytics domain." – Just Analytics

SR Siliconreview Team
June

"Start by doing what's necessary; then do what's possible; and suddenly you are doing the impossible." – Francis of Assisi

Year on year, market conditions differ. Technology advances in leaps and bounds but Analytics rarely drops out of the Top 3 priorities for CXOs. Just Analytics pride themselves as being a niche SI in this space with deep expertise and focus. Founded in 2011 by ex-Oracle employees with a profound passion for data and a firm belief that analytics provides organizations with the insight of their past and enables them to chart the future growth for their success, Just Analytics has grown over the years from 5 employees to 35+ employees showing a steady growth in terms of their Customers, Projects, Technology

AGENDA

1. Why Car Damage Recognition System

2. How it works

3. Demo

Why Car Damage Recognition?

Car Insurance claims are usually complicated and time-consuming process.

There are several steps in the process which are carried out by various human operators

This is resource consuming and introduces the probability of human error or fraud.

Customer can submit an online form with the picture of damaged car.

The AI driven algorithms can detect damage and estimate the damage cost.

The details from form and AI models can then be documented using AI guided applications.

Customer will receive the appropriate Insurance payment.

# How it works

Step 1

OBJECT DETECTION MODEL TRAINING

Step 2
SEVERITY CLASSIFICATION MODEL TRAINING
